

Victory Keys to Safety

"Applying Risk Management to Winter Driving Conditions"

Before Checks:

Check road driving conditions

- Contact your staff duty officer
- Contact your local BSB

Vehicle heating system: check radiator cap and hoses for cracks and leaks. Have certified mechanic check antifreeze and test heater and defroster functioning.

Windshield: Ensure that wipers are in good condition and that windshield wiper fluid container is full.

Ensure that the following are on hand:

- First Aid Kit*
- Warning device (warning triangle)*
- Scraper w/ brush on end **
- Reflective vest (EN471 Standard)**
- Flashlight **
- Fire Extinguisher**
- Tire Chains**
- Jumper Cables**

* Mandatory Items per UR 190-1, UR Pam 190-34

**Recommended equipment

During Operations

- Weather conditions might change during your commute: Anticipate icy road conditions on roads especially in shaded areas and on bridges.
- Watch for slippery spots called glare ice or black ice. These may appear on clear roads in shaded areas. Remember, if you see a patch of ice brake prior to reaching it and try not to brake while actually on the ice.

"Always Assess the Risk of Winter Driving!!!"
